

There's a new element on the periodic table...

TCu29 = Tokenized Copper.

INTRODUCING TCU29

The copper-backed token.

TCu29 (\$TCU29) is the future of commodity investment: a tokenized copper-backed asset offering investors direct, efficient, and transparent access to one of the world's most strategically important metals.

Copper (Cu, atomic number 29) is the lifeblood of electrification, renewable energy, and industrial growth. With mounting supply constraints and surging global demand, copper's strategic importance is undeniable. TCU29 bridges the gap between physical commodities and the digital economy.

Token mechanics & backing

combined metal portfolio

Use cases

- ⑤ Liquid, tokenized exposure to copper with transparent reserves and onchain proof-of-ownership.
- ⑥ Hedging against inflation and volatility.
- ⑦ DeFi collateral for copper-linked derivatives.
- ⑧ Structured redemption pathways via institutional offtake agreements (tokens converted to fiat or stablecoins) and discretionary buy-backs by the issuer.
- ⑨ Operating exclusively on the Ethereum Chain (ERC-20), aligning closely with MiCA regulatory standards while benefiting from expanded DeFi composability and wider RWA interoperability.
- ⑩ Built for industrial users: supply chain, procurement, just-in-time logistics for copper: API/ERP integration, bulk redemption scheduling.

WHY IT MATTERS

Physical copper, digital rails: audited reserves with the transferability, divisibility and transparency of an ERC-20 asset.

WHY COPPER

The metal of electrification.

Global demand drivers

Renewable energy

Solar and wind require 3-5× more copper than fossil-fuel generation.

AI data centers

A 1 MW facility requires 20-40 tons of copper.

Electric vehicles

An EV needs 4× as much copper as an ICE vehicle.

AI robotics

AI + robotics integration is a significant factor in the overall 3-5% rise in global copper demand.

The supply gap

- 6.5 Million MT annual deficit by 2031:** 36.6 Million MT demand vs 30.1 Million MT supply (McKinsey & Company).
- 9.9 Million MT deficit by 2035** under current trends (S&P Global, 2022).
- Current mine production is ~22 Million MT annually, with recycling contributing an additional 4-5 Million MT (McKinsey & Company).
- New mine development takes **15-20 years** due to permitting and technical hurdles, limiting near-term supply growth.

Supply gap drives copper price

DIGITAL RAILS

1 TOKEN = 1 LB OF PHYSICAL COPPER

The benefits of TCu29 vs futures & forwards

FEATURE	TCU29 TOKEN	FORWARD CONTRACTS	FUTURES CONTRACTS
Direct asset ownership	Yes	No	No
Physical backing	Yes, 1 lb of copper	Sometimes (if settled physically)	Sometimes (if settled physically)
Transparency	Regular audits	Low	High (exchange-regulated)
Liquidity	24/7, on digital platforms	Low (OTC, bespoke)	High (exchange-traded)
Counterparty risk	Low (audited reserves)	High	Low (clearinghouse)
Inflation hedge	Yes	Indirect	Indirect
Physical delivery	Not required, handled by issuer	Often required	Sometimes required
Roll risk	None	Yes	Yes

MECHANICS

How does it work?

Overview

- ✓ TCU29 is a tokenised real-world asset (RWA) representing a direct claim on one pound (1 lb) of physical copper.
- ✓ Fully backed by physically-allocated copper, with blockchain infrastructure enabling transferability, divisibility and transparency.

B2B features

- ✓ API/ERP integration for enterprise clients: real-time tracking, automated compliance.
- ✓ Bulk/bespoke redemption scheduling, strategic reserve planning, just-in-time supply coordination, industrial procurement optimisation.

Backing & verification

- ✓ Strict 1:1 backing of token to physical copper.
- ✓ Verified physical inventory in secured facilities.
- ✓ Independent third-party audits of reserves vs supply.
- ✓ Insurance covering theft, fire, damage.

Acquisition & holding

- ✓ Primary distribution: industrial users, institutions.
- ✓ Secondary market listings on digital asset exchanges (where available).
- ✓ When held, the token provides a verifiable digital claim on the underlying physical copper.

Redemption options

01 Exchange trading

Secondary market liquidity: tokens trade on exchanges, enabling peer-to-peer liquidity and price discovery via market forces.

02 Direct physical delivery

For OTC only AML/KYC-approved businesses & accredited participants meeting minimums (e.g., LME contract size). Tokens redeemed for actual copper delivered via structured logistics.

03 Buy-backs by issuer

The issuer may offer discretionary buy-back of tokens from holders at a slight discount, contingent on operational and market conditions.

KEY BENEFITS

Direct access to copper with a verifiable claim on physical inventory · high transparency through audits, insurance and robust custody · digital-asset benefits: divisibility, easy transfer · applicable to both financial and industrial use-cases.

BACKING & REDEMPTION CLARITY

Layered backing, clear pathways.

Table 1, Copper backing layers

LAYER	DESCRIPTION	ROLE
Allocated physical inventory	Deliverable copper held in insured facilities	Immediate redemption capability
Stockpiled ore	Verified copper ore stockpiles	Near-term processing & replenishment
In-ground reserves	>1.2bn lbs geologically verified copper (Kelvin Deposit, Arizona)	Expansion capacity & long-term supply assurance
Financial safeguards	Insurance, balance-sheet recognition	Redemption risk mitigation

Table 2, Redemption pathways

PATH	AVAILABILITY	NOTES
Physical delivery	Threshold-based	Scheduling, logistics & compliance apply
Secure storage	Ongoing	Allocated custody under issuer control
Issuer buy-back	Discretionary	Redemption risk mitigation
Secondary market	Market-driven	Liquidity not guaranteed by issuer

TCu29 is redeemable, not an on-demand consumable.

DEFINITION, SCOPE & MARKET FRAMING

Infrastructure, **not** a financial product.

TCu29 is a tokenised commodity infrastructure instrument representing a direct, redeemable claim on physical copper.

✓ What it is

It is designed to:

- ✓ Secure and mobilise copper supply for industrial, infrastructure, and institutional users
- ✓ Digitise ownership, transfer, and settlement of copper inventories
- ✓ Enable efficient collateralisation, procurement, and logistics planning
- ✓ Bridge physical copper markets with modern digital settlement rails

Each token represents:

- ✓ Exactly one pound (1 lb) of copper
- ✓ A legally enforceable redemption right for OTC only AML/KYC-approved businesses & accredited participants meeting minimums (e.g., LME contract size)
- ✓ A claim supported by audited inventories and corporate balance-sheet backing

✗ What it is not

TCu29 is NOT:

- ✗ A security · a derivative · a futures or forwards contract
- ✗ A yield-bearing instrument
- ✗ A speculative cryptocurrency
- ✗ A promise of price appreciation

TCu29 does NOT:

- ✗ Offer returns, interest, or profit participation
- ✗ Rely on leverage, rehypothecation, or synthetic exposure
- ✗ Guarantee secondary-market liquidity
- ✗ Replace industrial procurement contracts

Framing principle

All market commentary is contextual, **not** promissory. Copper price scenarios are provided solely to explain macro-economic demand pressures, illustrate why copper is becoming a strategic resource, and support the industrial rationale for securing supply. They do **not** constitute forecasts, form part of any offer, or imply expected returns.

Positioning language

TCu29 does **not** derive its value from expectations of appreciation, but from the utility of assured copper access in increasingly constrained markets. Price scenarios should be treated as external market conditions, **not** token attributes.

A digital representation of copper ownership, not an investment scheme.

TWO-TRACK COMMUNICATION FRAMEWORK

Built for industry **first**.

Track A · Industrial / Institutional

Primary

Audience

- Industrial copper users · infrastructure developers
- Energy, AI, defence, and manufacturing firms
- Banks, commodity desks, structured-finance teams

Focus

Track B · Market Access / Retail

Secondary

Audience

- Market participants accessing secondary liquidity

Focus

- Token mechanics · wallet compatibility · exchange access

Strict limitations

- ⊗ No yield language
- ⊗ No performance framing
- ⊗ Clear suitability disclaimers

Retail access is incidental, not foundational, to the project.

FREQUENTLY ASKED QUESTIONS

The essentials.

What is TCU29?

TCu29 is a Real-World Asset (RWA) token where each token represents a direct claim on one pound (1 lb) of physical copper. Unlike purely digital cryptocurrencies, every TCU29 token in circulation is backed by an equivalent amount of physical copper stored in secure facilities. Built on leading blockchain technology, TCU29 offers the benefits of digital assets (easy transferability, divisibility, and integration capabilities) while maintaining a direct connection to a valuable physical commodity.

How is TCU29 backed by physical copper?

TCu29 employs a multi-layered backing structure to ensure each token maintains a verifiable 1:1 relationship with physical copper:

- ✓ **Physical inventory:** verified copper in secure facilities with regular independent audits
- ✓ **Strategic supply chain partnerships:** established relationships with producers securing preferential access
- ✓ **Affiliated mining operations:** over 1.2 billion pounds of geologically verified copper resources

This comprehensive approach ensures the integrity of the 1:1 backing relationship between tokens and physical copper across all market scenarios.

Which blockchains does TCU29 operate on?

Operating exclusively on the Ethereum Chain (ERC-20), TCU29 aligns closely with MiCA regulatory standards while benefiting from expanded DeFi composability, enhanced interoperability across the wider RWA ecosystem, and improved accessibility for institutional participants.

How can I redeem TCU29 tokens for physical copper?

Each TCU29 token represents the right to redeem 1 lb of investment-grade copper through distinct options:

- ✓ **Future exchange listing:** sell tokens on digital asset exchanges once listed; market-determined liquidity and pricing; peer-to-peer trading as an alternative to physical redemption.
- ✓ **Physical delivery or secure storage:** for OTC only AML/KYC-approved businesses & accredited participants meeting minimums (e.g., LME contract size); delivery to your chosen location (shipping and insurance costs apply) or secure storage in insured facilities managed by Tempestas or appointed custodians.
- ✓ **Buyback by Tempestas Copper Inc.:** discretionary buybacks when restocking reserves, typically at a slight discount to market rate; time-limited offers communicated through the official portal.

FREQUENTLY ASKED QUESTIONS

Why is copper becoming a strategic resource?

Copper is undergoing a fundamental transformation from industrial commodity to strategic resource due to several converging factors:

- ✓ **AI infrastructure:** modern AI data centres require 20-40 metric tons of copper per megawatt, significantly higher than traditional facilities
- ✓ **Renewable energy:** solar and wind installations require 4-5× more copper per MW than traditional power generation
- ✓ **Electric vehicles:** each EV uses ~183 pounds of copper vs just 43 pounds in conventional vehicles
- ✓ **Global electrification:** expanding electricity access in developing regions requires massive copper investments

Against this accelerating demand, copper faces severe supply constraints: new projects typically require 12-18 years from discovery to production, global ore grades have declined 30% since 2000, and ~65% of undeveloped copper resources are in water-stressed regions.

What are the projected copper price scenarios?

Based on comprehensive analysis of both demand drivers and supply constraints, TCU29 has developed three distinct scenarios for the copper market through 2030:

- ✓ **Conservative AI scenario:** copper reaching \$25/lb by 2030 (5× from 2023 levels), driven by AI data centers adding 1 million tons/year to global demand
- ✓ **Moderate AI scenario:** prices approaching \$40/lb by 2030 with potential Defense Production Act invocation as global deficits reach a cumulative 51 million tons over 2024-2030
- ✓ **Extreme AI scenario:** a price ceiling of \$52/lb by 2029 where copper transitions from traded commodity to rationed strategic asset

These projections, while supported by comprehensive supply-demand analysis, represent potential outcomes rather than guarantees.

Who is TCU29 designed for?

While serving diverse market participants, TCU29 maintains a primary focus on business-to-business users within the copper supply chain: **industrial copper consumers** (manufacturers securing future supply through token holdings), **technology infrastructure developers** (AI data centers, renewable energy projects facing acute copper supply challenges), and **commercial copper traders** (professional traders, commodity desks, specialized trading firms benefiting from physical-digital arbitrage). For these commercial entities, TCU29 offers specialized integration capabilities including comprehensive API infrastructure, multi-user business controls, and custom redemption scheduling.

How does TCU29 ensure security and transparency?

TCU29 implements multiple security layers protecting both digital token operations and physical copper holdings:

- ✓ **Physical security:** 24/7 surveillance, controlled access protocols, environmental controls, comprehensive insurance
- ✓ **Regular independent audits:** scheduled and surprise audits by specialized third-party firms
- ✓ **Blockchain integration:** audit results recorded onchain, creating an immutable verification history
- ✓ **Multi-signature authorization:** critical operations require approval from multiple authorized parties

FREQUENTLY ASKED QUESTIONS

What are the future development plans for TCU29?

TCu29's roadmap outlines a strategic vision across multiple horizons. **Near-term:** enhanced redemption system with improved smart contracts and optimized logistics coordination; strategic partnership expansion across the copper value chain; institutional adoption framework with specialized solutions. **Medium-term:** expanded asset integration with complementary tokens; advanced trading tools for analyzing copper markets. **Long-term:** a foundational component of a broader tokenized commodity ecosystem; seamless integration with industrial supply chains and procurement systems; support for sophisticated financial products built on TCu29's foundation.

Is TCU29 a security?

TCu29 is structured and positioned as a **commodity claim token** representing direct ownership of physical copper, not a security, investment contract, derivative, or futures contract. This classification is reinforced through several fundamental design elements:

- ✓ **1:1 physical backing:** each token represents exactly one pound of physical copper
- ✓ **Direct redemption rights:** token holders have concrete redemption rights for physical copper
- ✓ **Clear documentation:** the Asset Trust Agreement legally governs the redemption process
- ✓ **Transparent verification:** regular independent audits confirm physical backing

This framework aligns with established principles for commodity-backed digital assets, creating clear distinction from speculative cryptocurrencies without intrinsic value.

How is the underlying purchased copper directly connected to each TCU29 token?

Each TCu29 token (\$TCU29) is issued against the verified copper reserves held by Tempestas Copper Inc. Tempestas Global Ltd, as the 70% shareholder of Tempestas Copper Inc, controls the economic rights to this copper and facilitates token issuance and distribution via its regulated asset management partner, Digital RFQ.

How is TCU29 held liable for the purchased copper?

For transactions exceeding USD 100 million, the corresponding copper obligation is recognised on Tempestas Global Ltd's balance sheet in the subsequent reporting year as a formal liability. Where required, an MR01 filing can be lodged with Companies House to register a first-ranking charge over Tempestas Global Ltd: a legally enforceable security interest, effectively placing a lien over the company up to the value of the sale transaction. The secured amount is recorded on the 2025 balance sheet as a liability, ensuring the copper obligation is transparently embedded within the company's financial statements. In the event of insolvency or corporate failure, the secured creditor would have the legal right to enforce the charge and claim the copper (or equivalent value) represented by the liability.

THE PARTIES

Who stands behind it.

Tempestas Copper Inc. (TCOP)

tempestas-copper.com

Part of the Tempestas Group of Companies, with roots back to the 1920s, when the Johnson family of Arizona founded the Zelleweger Mine, patented in 1924, and spent nearly 100 years managing their land: test-drilling and mining, extracting small amounts of copper and gold. The company now manages a far bigger Kelvin Project area of 226 claimed lodes in Kelvin, Arizona, as well as other mining projects in Mexico and Chile. Led by President & CEO Andrew Paul, a 25-year veteran of major investment banks. In May 2025, TCOP embarked on a major multi-million-dollar test-drill program to further confirm the location, volume, type and value of the in-ground copper at the Kelvin Project, aiming for completion in 2027.

Tempestas Global Ltd. (TGLO)

tempestasglobal.com

Tempestas Global Limited is part of the Tempestas Group of Companies, a family office with more than \$7 billion in proprietary assets owned and controlled by the group and a combined 80 years of experience across mining, natural resources, corporate finance and principal investment. Our focus is on identifying, acquiring, developing and financing mining and investment opportunities for the Group's own account, including copper mining operations in the United States and Chile.

Pioneering the future of copper, we align this essential resource with the evolving demands of technology and industry. By combining disciplined corporate-finance strategies with modern mining practices, we seek to unlock the potential of copper assets owned, controlled or developed by the Group, supporting technological innovation and environmental responsibility.

Tempestas structures and secures financing for the Group's own businesses, assets and projects. Depending on the requirements of a particular project, this may include bank or corporate debt, secured or collateralised financing, and asset-backed funding arrangements. Tempestas undertakes these activities with banks, institutional funders, corporate counterparties and private capital providers, only in connection with the Group's own capital requirements.

Digital RFQ Limited (DRFQ)

digitalrfq.com

An FCA-registered EMD. Formed in 2019 as a digital asset brokerage focusing on institutional and corporate adoption of digital assets, registered and regulated by the FCA as an Agent of an EMI since 2019. Pioneered the use of stablecoins for cross-border payments from emerging markets in 2020; has successfully completed over 10,000 settlements totalling \$1.2 billion for businesses in Africa, LatAm and SE Asia. Spent 4 years as a subsidiary of Nukkleus Inc (NUKK); in July 2025, DRFQ was bought out by management and is now part of Match Financial Holdings Limited.

Match, 100% owner of Digital RFQ Limited

100% Investment One (El Salvador) + further international entities incl. banking assets

ENTITY, CONTROL & LIABILITY

Clear roles, clear protections.

Corporate & functional roles

TCOP

- Owns and controls copper assets
- Manages mining operations and physical inventory
- Custodian of underlying commodity backing

TGLO

- Parent company: 70% ownership of TCOP
- Financial structuring and balance-sheet support
- May recognise copper liabilities for large transactions
- Subject to MR01 charge where applicable

DRFQ

- FCA-regulated entity
- Appointed distributor / access facilitator
- No ownership of copper assets

Token holder rights & protections

Token holders

- ✓ Hold digital representation of copper claim
- ✓ Possess contractual redemption rights
- ✗ Not shareholders, lenders, or beneficiaries of profits

Insolvency & enforcement logic

- ✓ Copper obligations over USD 100m may be recorded as liabilities
- ✓ First-ranking charges may be registered against Tempestas Global (TGLO)
- ✓ Secured creditors may enforce against copper or equivalent value

DISCLAIMER

This information provides a general overview and is **NOT** financial or investment advice. TCu29 is a copper-backed digital asset token.

Participants should conduct their own research, understand risks (commodity market fluctuations, blockchain technology), and consult independent advisors. Refer to official TCu29 documentation and Terms of Service for complete details.

*Not available in the UK or to UK persons. TCu29, like all digital asset tokens, involves risk. Availability is not guaranteed. Geographic and eligibility restrictions apply depending on local regulations.
